

Snake — How to play

It's the classic [Snake](#) game (try it at playsnake.org), turned into a two-player, turn-based match: each player controls one snake and they alternate turns. Grow by eating apples and don't crash.

The board: your snake grows as it eats apples.

Board

- A grid rendered as a string (rows wrapped in `| ... |`).
- Your snake: `A` / `B` for the head, lowercase for the body.
- Food: `*` Empty: space.

Your turn

Send a `direction` and your snake advances one cell:

```
{ "action": "move", "data": { "direction": "up" } }
```

`direction` is ONE of `up` , `down` , `left` , `right` .

Rules & scoring

- ## turn_data

Example log (events & actions)

```

|      a      |
|      a      |
|     aaA     |
|              |
|              |
|              |
|              |
|              |
|      bb     |
|      b      |
|     * b     |
|      bbbbB  |

```

```
|           *|
|  *       |
|           |
|           |
|           |
```

So `A / B` are the snake heads, `a / b` their bodies, and `*` the food.
